CONFIDENTIAL CAPABILITY BRIEF

Find the gaps between schedule, cost and packages.

Relate each source through the owner's Work Breakdown Structure (Owner WBS). Keep the evidence, uncertainty and professional decisions distinct.

At month-end, the records need to describe the same work.

A schedule, a forecast and a commercial register can each be credible while leaving their scope relationships unclear. A familiar code alone does not resolve the management question.

One scope reference. Independent relationships.

Relate

Review each source against the Owner WBS, preserving its original assertions.

Review

Inspect contrary evidence and record the actual scope of professional decisions.

Report

Read the separately approved position, exact Actions and conclusions that remain withheld.

WBS↔LINK supports the scope-evidence review. It does not establish project performance, certify work, validate payment entitlement or authorize payment.

ACTUAL HARBOURLINK PROOF · JULY SOURCE POSITION

A precise gap. An exact Action.

Owner WBS 1.5 · Testing and Commissioning

180

schedule relationships

ABSENT

0 cost relationships. Not a zero-cost claim.

EXACT PROFESSIONAL ACTION

Confirm whether the missing governed relationship is expected or requires project-controls attention.

F-0611c8162d · SCH-05-001 · Original assertion: WBS Code = 1.5.1.
Source assignment, not individually reviewed. Whole-version approval is separate.

The gap limits an integrated comparison for this work area. Whether the absence is expected remains a question for the project-controls team. No cause, schedule impact or financial effect is established.
