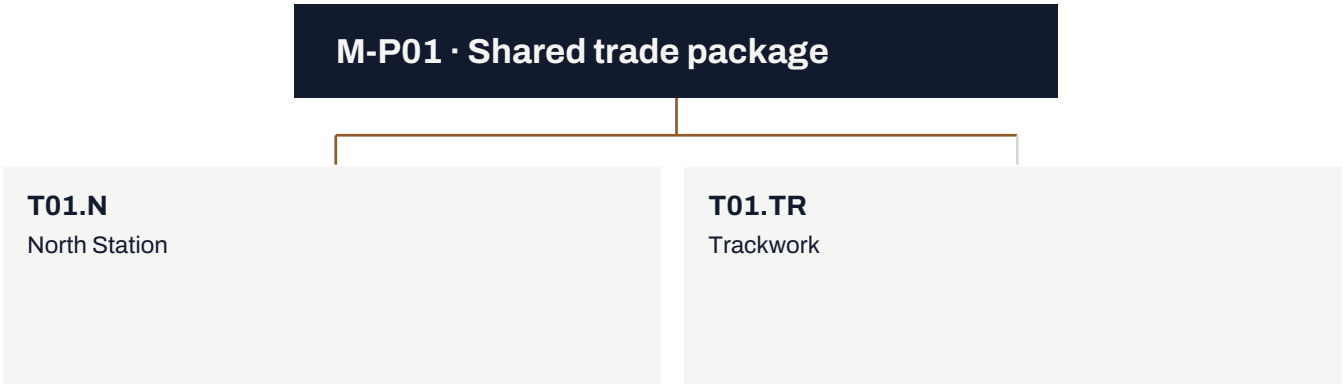
North interchange

1. One package. Two proposed work-area targets.

The supplied package spans North Station and Trackwork. Count one unique package record at project level; retain both proposed scope targets without assigning its full value to either child.

1	2	Not recorded
unique package record	proposed target rows	decisions / approvals



M-P01 · CAD 120,000 is the whole source package, not a child allocation. Neither target has a separately allocated cost or schedule activity. Missing child information is not zero. Two target rows are not two source packages.

One package spans two scope dimensions.

One source-record version has two proposed WBS targets. CAD 120,000 is its whole source value, not an allocation to either target. The target views must not be added together.

Requested professional review

Confirm both scope connections and obtain an explicit allocation basis before attributing any shared package value to a WBS element. Record professional decisions and separate approval.

2. Locate the original evidence

Original source	Source type	Located evidence
Owner_Scope_Register.csv	Owner WBS	3 source blocks
Shared_Trade_Package.csv	package	1 source block

2.1 One original record, retained once

Source / location: Shared_Trade_Package.csv / row 2

Original assertion: Record ID: M-P01 | Owner Code: | Description: Install trackwork at North Station | Trade: Fictional Transit Works | Area: NS | System: TRK | Start: | Finish: | Amount: 120000 | Currency: CAD | Revision: A | Status: Synthetic source assertion | Basis: CAD 120000 is the whole shared package source amount. No amount is allocated to either WBS target; values must not be added across targets. | Boundary: One package covers North Station and Trackwork, two different scope dimensions. Source-supported connections require professional review and separate approval. No cost allocation, payment certification or reporting-cycle approval is supplied.

Authority: No professional decisions or approvals recorded. Shared source value is not a child allocation.

Use the workbook Crosswalk, Findings and Sources sheets to follow each recorded assertion, revision, proposed target and original-file fingerprint. Original files are supplied beside this report.

Source-supported multi-target proposals are not professional decisions, approved mappings or child-level financial allocations.

Prepared fictional demonstration using explicit source-code readings. No professional decisions, whole-version approvals, payment certifications, project-health results or aggregate financial position are created.
